

SR3100 Binding Instructions

Note: The SR3100 features DSM2™ second-generation technology and is only compatible with transmitters that utilize DSM2 protocol (like the DX3R). DSM® first-generation transmitters will not work with the SR3100.

1. With the receiver off, insert the Bind plug into the Batt/Bind port in the receiver.
2. Power the receiver. The amber LED will flash continuously, indicating the receiver is in Bind mode.
3. Turn on the transmitter and make sure the transmitter shows the desired model number that you intend to use.

4. Press the rolling selector to access the List screen.

5. Rotate the roller to highlight the Bind screen and press the roller to access this screen.

6. Rotate the roller to highlight BIND.
7. With the steering wheel, throttle stick and Aux channel (if applicable) in the desired preset failsafe positions, press the roller to initiate the bind process and to store the failsafe positions. BIND will flash for a few seconds, then the transmitter will beep indicating the process is complete. The LED on the receiver should now be solid indicating a successful bind has taken place.
8. Remove the bind plug and store it in a convenient place.

Note: The only time it's necessary to do a rebind is if different failsafe positions are desired or if the receiver is to be bound to a different model memory. Also, if you place the transmitter into bind mode without the receiver, it will default to DSM mode and will only work with a DSM compatible receiver. You will need to rebind to the SR3100 if you want the transmitter to use the DSM2 protocol.

Note: Some Spektrum™ surface receivers like the SR3000 use a Bind button rather than a Bind plug. The binding process is the same with this receiver, however, instead of inserting the plug before powering up the receiver, press and hold the Bind button while powering up the receiver to enter the Bind mode.
